

Care For What You Love

The materials used to decorate your home are sensitive to the sun, just like your skin. Carpets, upholstery, curtains, artwork, and even your wood flooring and furniture are vulnerable to fading with exposure to sunlight.

This fading is inevitable, just like the sun's aging effects on skin. Fortunately, LLumar® window film helps to protect your skin and the things you love. Solar Control films effectively block >99% of harmful UV rays**, significantly slowing and reducing the sun's damaging, fading effects. This helps keep your decor looking fresh and vibrant for many years. It's better for you and your family, too: The Skin Cancer Foundation recommends LLumar as a part of a comprehensive skin care program.

LLumar window film helps preserve the color of fabrics, carpets, furniture, and hardwood floors.

**Wavelengths 300-380nm

HEAT

The UV rays in sunlight are the greatest cause of fading, while visible light and heat are also contributors†.

The more these factors are blocked, the longer your furnishings keep the fresh look you love. LLumar window film lets you decide when it's time for a décor change, not the sun.

†Window films do not eliminate fading - they reduce it. Artificial lighting, humidity and dye stability are some other contributing factors to fading. For further information, see LLumar.com/download-library.

More Sun Protection Tips:

You share your home with the people and things you care about most. Live with them and love them for a long time - with LLumar window film and these expert tips.

ARTWORK

Vulnerability varies, depending on the medium. To be safe, never place cherished art or photos in direct sunlight.

FABRICS

Don't assume more expensive fabrics are more fade-resistant. Fiber type, printing or weaving technique, and dyes all make a difference.

WOOD

Keep in mind that natural wood finishes are more tolerant of sun exposure than stained woods, which can darken over time.

PEOPLE

The more your skin and eyes are protected from the sun, especially UV rays, the less adverse the impact as you age.
