Security Film

Stately Solutions

Judy Levine is an interior designer who specializes in elegant and detailed design projects. This holds true for the magnificent home Judy designed and the one in which she and her family reside.

The Levine estate includes a main residence, pool house, and multi-paned miniature playhouse. The 521 French paned windows of the main house were shielded with a combination of electric blinds and draperies which made it impossible for her to enjoy the very views of the property, and exposed precious furnishings to damaging sunlight. For when she did open up the blinds and drapes, it became much too warm making exorbitant demands of the air conditioning, the sun's glare militated against the view and ultraviolet light helped to cause fading.

"As a designer I find my clients are always concerned about protecting their expensive fabric and furnishings, and I recommend Vista® to them regularly. But, I am also familiar with the additional capabilities of high-tech window films, like safety, and

that is another reason why we had Vista® installed on our own residence." said Mrs. Levine.

After an analysis of the problem, her solar control window film expert recommended the installation of Vista® UVShield® Dayview V45 on the windows of the main residence and the pool house. Mrs. Levine stated, "The film was professionally installed, quickly, without mess and without the need to interrupt my normal day-to-day activities. The film is neutral in appearance and virtually invisible from both sides of the window. It's really changed our lives for the better."

Dayview enabled Judy to make optimum use of the outdoor views afforded, while halving the sun's glare and reducing solar heat by 38%. The film gives the appearance of expensive treated glass at a fraction of the cost and carries a lifetime residential warranty for materials and labor.

The problem with the glass in the 144 square-foot

safety

stone and slate playhouse was not one of solar control but rather of the dangers inherent in stained glass windows. The stained glass gives the playhouse a special colorful charm but clearly presented a risk for boisterous children at play. "I wanted to protect our grandchildren from the dangers of broken glass," said Mrs. Levine."

Clear security film that did not alter the color scheme was installed on each of the twelve French windows in the playhouse. The security film is a laminated film of polyester and coatings bonded by a unique adhesive system that can drastically reduce damage and injury from broken window glass. The film provides optical clarity without distortion or a yellow, cloudy or frosted shadow. A scratch-resistant surface assures trouble-free maintenance with most conventional window cleaners, including those with ammonia. The film also provides virtually total protection from harmful

ultraviolet radiation to help prevent the fading of furnishing fabrics and give skin protection against dangerous sun rays. Thanks to Vista® UVShield® this designer and her family can feel secure about the glass when they enjoy this special playhouse together.
